

DISPOSABLE LUBRICATION CONTAINER SYSTEM

ABSTRACT OF THE DISCLOSURE

5 A disposable lubricating container system including a disposable container, a carrier,
a sealing unit and transfer tubes. The carrier rigidly attaches itself to an engine or other
machine part and the container attaches to the carrier. The container mates with the carrier to
10 securely hold the container while being easily removed or inserted into the carrier. The
sealing unit attaches to a neck portion of the container and serves to provide a fluid transfer
system for the lubricating oil or fuel/oil mixture from the container to the engine. Lubricating
oil in the container is transfered to an existing oil reservoir, directly to engine components or
other machine parts.
